Thevin Silva

thevin.silva@gmail.com | 07838681888 | London/Bristol | github.com/ThevinSilva | thevinsilva.com

TECHNICAL SKILLS

- **Programming Languages:** Python | Javascript/Typescript | C# (.Net)
- **Technologies:** React | Node | Svelte | Socket.io | MongoDB | RxUI | WPF | Selenium | SQL | Flask
- **Tools:** Linux | Shell | (Neo)Vim | Git | GitHub | Jupyter | Rstudio | Visual Studio | Azure | Devops

EDUCATION

University of Bristol 2022 - 2026

Bsc Data Science

- Authored a report on Multivariate Statistical Process Control (MSPC) and process drift, implementing PCA and KDE-based monitors on datasets from employer (SciY), delivering a real-time C# prototype as part of my year in industry.

St Dominic's Sixth Form College 2019 - 2021

A-levels

- A* Computer Science | A* Mathematics | B Physics | B Further Mathematics

EXPERIENCE

Software Developer Sep. 2024 – Sep. 2025

SciY - Optimal Industrial Technologies *Bristol, UK*

- Worked in a large .NET/WPF (ReactiveUI) codebase debugging async/UI issues and refactoring legacy components, resolving dozens of user-facing bugs and cutting UI freezes/crashes.
- Collaborated with my team in a two-week release cycle, contributing to planning and reviews in an agile work environment.
- Delivered 3 KDE-based prototypes and 2 reusable evaluation scripts across 4+ datasets, improving early drift detection accuracy by 10–20% vs baseline threshold methods as part of the R&D team.

Student Representative Oct. 2022 – Aug. 2023

University of Bristol - School of Mathematics *Bristol, UK*

- Attending monthly Student Staff Liaison Committees, communicating feedback to Senior Staff.
- Engaging with the student body through social media and increasing engagement by 50%.
- Proposing possible solutions that staff can take to improve.

PROJECTS

Enhanced Azure Devops | Svelte / Flask / Pandas 2025

Internal reporting tool for SciY to replace a £2k/per month third-party test reporting and auditing product.

- Queries 100k+ of work items and test artifacts (test plans, suites, runs, enhancement stories, bugs) to produce consoli-dated reports.
- Deployed a Svelte front end backed by Flask APIs to generate audit-able reports on demand, reducing manual Excel-style reporting from tens of minutes per report to seconds.
- Built a Python wrapper over the Azure DevOps REST API, turning verbose, one-off REST calls into simple, reusable helper functions.

Kaizen Records | Javascript / Next.js / Firestore 2023

Customer-facing marketing site with interactive mini-game built for an indie record label

- Sold a production-grade Next.js site with lightning fast turn around as a freelance dev.
- Built a 2D side-scrolling browser game with a Firestore-backed global leaderboard to engage visitors, storing and displaying player rankings in real time.
- Used Framer Motion for smooth animations and transitions, creating a polished, game-like experience.

Trading Bot | Typescript / Puppeteer / Electron 2022

Desktop app that automatically monitors market and executes transactions, sold as a paid tool.

- Built a cross-platform Electron desktop app in TypeScript that uses Puppeteer to monitor online markets, scrape item prices and automatically snipe / trade in-game skins based on configurable rules.
- Automated a previously manual, tab-refresh-heavy workflow so users can track multiple markets concurrently and execute trades far faster and more consistently than by hand.
- Packaged and sold the bot as a paid product to players, including release management and CI/CD to ensure stability.

Full Stack Web Application | MongoDB / Express / React / Node.js 2020

A social networking site with real-time forums and chat.

- Implemented a full MERN-stack application with user registration, profiles, forum threads and direct messaging, handling frontend, backend and database design solo.
- Built a single-page React front end communicating with a Node/Express REST API backed by MongoDB.
- Added Web-socket-based real-time updates so new posts and chat messages for multiple concurrent users.
